It is very easy to use and does not require any special.The present invention relates to a control system for a variable speed system of a vehicle, and more particularly, to a speed governor control system for a continuously variable transmission system of a vehicle, which controls the output speed of the continuously variable transmission system as a function of the output rotational speed of the continuously variable transmission system. In a system for an automotive vehicle such as a passenger car, a truck or the like having an automatic transmission, an input rotational speed derived from a vehicle speed detection signal transmitted from a vehicle speed sensor is applied to the input shaft of the transmission, and an output rotational speed at the output shaft of the transmission is controlled as a function of the input rotational speed and an output opening of a drive circuit. In such an automatic transmission system, the torque of the transmission is controlled as a function of the output rotational speed. Such a system is disclosed in Japanese Patent Laid-Open Publication No. 61-183867. In such a conventional automatic transmission system, a clutch means such as a friction clutch or a torque converter is selectively actuated to perform a speed change operation such as changing a shift position of the transmission. In this case, when the torque converter is used, the system is arranged such that, when the vehicle speed is low, a locking clutch is operated to shut off the torque converter and a direct coupling clutch is operated to connect the drive circuit and the transmission. In such a control system, if the vehicle speed is low, the magnitude of the input rotational speed is relatively small and a lockup clutch is actuated. Then, the output rotational speed of the transmission is not influenced and the magnitude of the output opening of the drive circuit is automatically set to a value corresponding to the vehicle speed. On the other hand, if the vehicle speed is high, the magnitude of the input rotational speed is large and a direct coupling clutch is actuated. Then, the transmission f678ea9f9e
